5TS TO BECOME A BETTER TEACHER, NOT A BITTER TEACHER

by:
Hershey D. Ronario
Teacher II, Casupanan Elementary School

What makes a teacher better? Which characteristics does a teacher have to possess to become a better teacher? What are the characteristics a teacher wants to possess to become a good teacher? The answers to these questions and the solutions are far more nuanced than a teacher would expect.

To become successful adults every other teacher wanted to be able to influence their students. Thereby a better teacher will change the life of the child. Teachers must have different teaching methods, approaches, and techniques as well as a creative way of inspiring and encouraging them to encourage students. Better teachers have several qualities that can lead them to produce students who are excellent not only in academics but, most importantly, in terms of morals and values. Here are 5Ts to be a great teacher but not a bad one.

Teamwork Willingness. Education and the cycle of teaching and learning are not a task that you can do on your own and without business. To you as an educator, collaboration and collaborative learning are a must for your students to be accessible in such a technique. Due to this, as you cannot bear the learning load on your own. It is more complicated for them to educate the students than what teachers see themselves as a leader inside the classroom. A better teacher, rather than being a spearhead, will act as a facilitator, guide. On the other hand, education's influence and impact on students is not on teachers, but students need help and guidance to be able to overcome difficult and challenging subjects. It is where the skills will be put back into the limelight as a facilitator of a successful instructor. Instead of becoming a dictatorial figure in the classroom, teachers must strive to help students learn and maintain their mastery by engaging with
the students in teamwork. Therefore, when teaching inside the classroom setting, this requires open communication and the ability to be flexible in the teaching methods, tactics, and techniques.

   Teaching with Enthusiasm. Passion as a teacher is one of the principal sources of motivation. This is the teachers' starting point for their educational careers. Sadly, this is a routine and excitement gradually die away. This sensation quickly gets lost as teaching becomes part of a routine. To say the same items and discuss the same topics repeatedly appears to make them sound less important to the speaker. It is something that affects all teachers, even though they cover a wide range of subjects related to education. Alas, losing that bit of passion can have detrimental effects on your teaching quality. Over short periods, students often must learn many different subjects, which quickly breeds disinterest for a single topic. When both students and teachers feel apathetic towards the subject, no substantive learning will likely occur. Try finding something interesting about your topic that will reignite your passion for it. Presenting to the class is as easy as learning new tidbits. Find something that's going to pique their attention and do your best to present it as the most fascinating fact. It's better enough to just bring a little thought into your presentation to promote better learning. Also, more attentive students will encourage you to put more effort into your teaching. It's an optimistic loop, which can yield fantastic results.

   Time Management. It's no secret that teachers have a lot of research to do. You not only need to spend hours and hours teaching students, but you do need to practice the subject ahead of time. Freshening up on new and old subjects helps improve your awareness and keeps you primed for any issues or problems that may arise. Comprehensibly, it takes a lot of time and it's hard to keep track of all the various things you need to cover. When you accept that teachers can't dedicate their whole day to covering an educational subject, you can understand why certain subjects aren't perfectly presented. Perhaps with proper planning, this is something that can be changed. Time
management is a critical part of any profession, but it is especially relevant in education. You have to process all the valuable knowledge in some way, without losing control of the clock. Using as many helpful tricks as you can to ease the time needed to plan topics. Some teachers tend to write reminders and flashcards before reading a significant subject. Master the art of making useful exposures. It is a skill that can cut down quite a bit in your training time.

Try Not to Prevent Learning. Helping students learn is just half the teaching job. Students aren't the only ones supposed to know something or two. Teachers must always be on the lookout for fresh and interesting knowledge about their profession. All who teach will have all the reality changed and a lot of subjects over time. New knowledge is often discovered which changes the direction of a scientific discipline. Sometimes, the very foundations of a transition in the environment and that means making some improvements to education. Teachers not actively learning new knowledge will not last long. To teach students effectively, the subject you are teaching needs to be kept informed. Keep reading as many books as you can and you can keep abreast of the changes. Teaching is an ability that can also be worked on. Teachers now use resources and other tools to learn to get better training and help students learn on their own. Many brush up on their pedagogy to develop their methods in the classroom. We can rely on positive results in classrooms and similar teaching settings as long as teachers strive to improve their careers.

Take Obstacles as Challenges. Teaching is a very unique task, with advantages as well as downsides. The teacher's year is also perceived to be one of a teacher's key advantages. Instead of doing a typical twelve months of service, teachers will relax and recover while out of school. This period is also used to plan the syllabus and instructional materials. Teachers never really take a break from teaching, in away. Perhaps the long days will prove difficult and the students will not always cooperate. Teachers should not
lose sight of their end goal – education. The devoted classes and a passion for teaching offset even bad days. When you know that these drawbacks are only temporary, you can live with bad days and inattentive students! Your teaching quality is the key factor that influences the education of the student. So long as you keep going at it, students will finally understand what they need to know.

Teaching is a career that demands a great deal of patience and dedication. Yet it's one of the most satisfying careers out there, too. You are a member of one of society's most important structures. Education is vital and society needs better teachers. Will and every teacher would, therefore, be on their way to be a better teacher, and the best teacher also.
