A DEEPER PERSPECTIVE ON EDUCATION

by:

Marvin Y. Lindog
Teacher III, Typo Elementary School

Education provides us with knowledge about the world. It paves the way for a good career. It helps build character. It leads to enlightenment. It lays the foundation of a stronger nation. (Duarte, 2016) Education is essential for everyone. It is the height of education that makes people earn and gain respect, admiration, recognition, and reverence. It is vital and crucial part of life both personally, socially and mentally. Conversely, the imbalanced and asymmetrical standard of education is still the foremost problem that needs clarification and solution. The significance and value of education is incontrovertible and unassailable for every one person. It is understood that education has all the constructive and positive effect on human life. Every man needs to study to be able to learn and cope up with the constantly changing world. Only with the beginning of education can people get and achieve knowledge and expand make a bigger view towards the society. In a deeper perspective, people can learn in every way. By watching television, listening to the radio and reading books, an individual can learn a huge amount of information about whatever thing they are engrossed and interested in such as science, technology, mathematics, news bulletins and current affairs, exchange rates, other countries' cultures and the likes. It appears that people may happen to be more functional and civilized if they obtained a better and proper education. In a neighborhood where inhabitants are not given an appropriate and suitable education, life cannot be as flourishing and wealthy if compare it to localities where there is a high quality and a proper standard for education.

In addition, education takes part in such the most basic role in our society that we cannot even envisage a life without it. It is an indomitable element for the development and civilization of the society. Not only does it help us builds up a healthy environment, but it also produces a progressive and an evolved population. In fact, the whole thing we build, construct and create in
this day and age is based on the knowledge that we acquire all the way through our life by way of education.
