A WAY TO A CREATIVE LEARNING

by:

Russel B. Alfonso
Teacher III, Orani National High School-Parang-Parang

Even though they have different personalities and characters they have to be appreciated and valued. Each one of them has variety of ways to learn because of individual differences but still it is our duty, as teachers to make them learn and motivated. Learning Mathematics, Science and several subjects may give them pressure in school but these subjects will give them wisdom and knowledge to grasp. As a second parent, we can provide them plenty of activities to make the learning fun and gratifying.

According to Cox (2019), creating simple science experiments is a way to make the learning fun. Hands on learning in science will give them excitement and happiness in discovering new things around the world. This type of discovery will make them realize that they can learn more and do more things for themselves. In this way, their confidence may increase in learning unique knowledge and may invent innovative materials that will develop their talents and skills as students.

Moreover, Brown (2019) believed that teachers must engage all kinds on intelligence in learning to make it more exciting. She emphasized that students have many different gifts to offer. They have variety of ways to learn. Some are visual, auditory and kinesthetic learners. It is better if an educator will provide several teaching strategies to make them learn. We may use graphics of varied colors, songs that contain important points of the lesson for them to remember or they can create their own presentation in front of the class based on what they had learned in the topic. By these methods, it will be easier for them to engross the knowledge from the teachers because they love what they are doing.
Davies (2019) emphasized the importance of incorporating group projects to promote collaborative learning and make the learning full of pleasure. Seeing your students enjoying each other’s company while accomplishing an activity is a lovely ambiance inside the classroom. Through group activities, they can share ideas, opinions and wisdom to make the activity successful. Promoting cooperative learning is one way to make them feel their worth and role as a student in the learning environment.

There are several ways to motivate the students and create a positive learning environment to make the learning better. We, as teachers are managers of the classroom. We have the authority to decide the best methods to be implemented to our learners to make an effective learning environment. Different teaching strategies may be executed but it is our love and care for our students that inspire us to teach them well.
