ACQUIRING IMPORTANT TEACHING STRATEGIES: A MUST FOR EDUCATORS

by:
Janeth S. Tolentino
Teacher 1 Mabiga Elementary School

Teaching is a process of showing or pointing out one’s person knowledge and experiences, which is basically organized in a discipline or strategy and generally motivates or provocative to the intellectual growth of another person. Literally, teaching is always wrapped up to teachers. Where, a teacher’s role is to teach and influence those younger generations on how to deal with their daily life.

The younger generations are more creatively thinkers and tend to work cooperatively in a group or with others, where they develop their ideas through collaboration and communication. And these aspects of innovation and creativity must be promoted in the classroom management.

The question especially in this time of pandemic is, as teachers, how can we keep up to the younger generation?

The key to this is by updating our skills to 21st innovative teaching strategies and methods. Improving the teaching-learning process through the use of different approaches and equipping with new trends and the use of varied teaching strategies to prepare students with the skills and characteristics that will help them live in this ever-changing technological world.

As stated by Janelle Cox (2016), the only way that we can do that is by having our own 21st century characteristics and skills. Here are five of the most important teaching strategies 21st century educators should have in today’s classroom. (1) Teaching Strategies to Be Able to Teach to All Learners; (2) Be Able to Implement Technology; (3)
Be Able to Foster Student Relationships; (4) Be Forward Thinking; and (5) Be Able to Embrace Change.

In summary, if we, teachers, take the time to stand in these skills and characteristics that are essential to be an effective 21st century educator, then we have fulfilled our job in helping our students have the ability to live and navigate in a world that is ever-changing. Having the ability to teach and reach all our learners, foster real and authentic relationships in this time where technology has taken over, embrace technology in teaching, prepare and build the future of our students, as well as be a life longer learner, then we have done our job effectively.
