ADVANTAGE OF TECHNOLOGY IN TEACHING AND LEARNING

by:
Regine V. Hipol
Teacher I, Bayview Elementary School

The world that we by and by live in, development is an essential factor. Over the long haul another item or contraption is being brought into the market to make our life simpler, moreover to impel an inside and out existing programming or gadget. In any case, it is vital for observe that paying little heed to the way that advancement accepts a significant part in simplifying our lives, it isn't the single occupation it has.

Innovation is logically building up its importance in the preparation region. The more development drives, the more benefits it obliges understudies at each tutoring level. Technology that is used in the examination corridor is very profitable in helping the understudies with appreciation and hold what they are being instructed. For instance, since there are different understudies who are visual understudies, projection screens related with laptops could be put in homerooms to permit the understudies to consider them to be as opposed to basically plunking down and checking out the educator teach.

There are different people who are of the appraisal that development ruins kids. For instance, as opposed to plunking down and getting more familiar with how to count, they will pick to get a calculator. Despite the path that there are people who are making these disputes, development really stays to be a very crucial piece of the overall population we live in today. By bringing it into our schools and study lobbies, we will ensure that the understudies are outfitted with much better instruments and data to gain their headway from school to the work place an amazingly straightforward one. We need to face reality, development is the \"in thing\" in the world today and it has gotten indispensable in each and every piece of our lives and tutoring has without question not...
been deserted. It is significant in giving more data to our understudies and besides on making them genuine in the work market
