AN ENVISION TO PHILIPPINE EDUCATION SYSTEM AFTER A DECADE

by:

Melody C. Mañalac
Master Teacher I, Townsite Elementary School

The Philippine education system was greatly influenced by the different periods of Colonialism. Starting from the Pre-Colonial period up to the present years, the basic education system is still changing to cope up with the needs and demands of the changing world. Many factors are influencing the education system. One is the rapid change in technology which is happening now. Besides, the socio-economic issues of the government make the education system continues to struggle with deep inequalities. The quality of education is another concern that needs to be addressed.

What will Philippine Education be like after ten years? As a future school head, I am optimistic that ten years from now, the Philippine education system will be able to suffice what the Constitution has mandated the State and all educational institutions.

The right of every Filipino learner needs to be protected. That relevant quality education must be accessible. Filipino children are mandatory for basic education. This is to ensure that no one is left behind in acquiring adequate learnings.

Also, a complete, adequate education relevant to the needs of the people and the society must be established. This is the reason why the government and the Department of Education keep on formulating and coming up with reforms in basic education. The implementation of the K-12 Curriculum makes our education system at par with international standards. Recent education reform has sought to boost enrollment levels, graduation rates, and produce 21st-century learners. The government invested a lot in education to accommodate the needs of the reforms. Additional classrooms, learning
materials, teachers, and teachers’ pieces of training were covered by the additional budget. Through the government’s initiatives, ten years from now, the educational institutions will be able to augment their capacity and efficacy to provide the Filipino learners a complete and adequate system of education.

In these changing times, technology will increasingly be assimilated into education for better learning. Textbooks and curriculums have gone digital nowadays, online lessons and classes will become more popular after a decade or so. Accessing classrooms using different online platforms will be a trend. The popularity of online courses will shape education stems directly or indirectly. Because of digitalization and automation education will become experiential and more focused on students being able to gain employable skills while in school. Moreover, global competence will further be required. Technology initiatives and global education approaches will be added to the framework to promote the global competence of the pupils. Improved curricula and courses will be integrated and taught. This will prepare the learners to become globally competitive and successful as enshrined in the Constitution which is to provide education relevant to the needs of the people and society.

Furthermore, as a future school head, I foresee improved and accessible study programs and curricula as part of the administration of an education system designed for out-of-school children, youth, as well as adults who need basic and functional literacy skills, knowledge, and values. As part of the mission of the education system, non-formal education offers opportunities for an alternative learning system that will respond to the needs of the individuals. These up-to-date programs will further eradicate illiteracy among out-of-school children and adults in the country. Also, technical and vocational education and training will be highlighted in the curriculum in the coming years.

The Philippine Education System will keep on changing as time passes by. Education reforms are crucial in paving way for economic development and for making
our education system aligned with international standards. Expect and be proactive in the revolution in education.
