BENEFITS OF MAJORING AGRICULTURE

by:
Jiezel C. Morales

Teaching agriculture to high school students opens them to understand how things grow, live and die. From planting of seeds, flowers, to potatoes, from carabao’s to tractor and soil. Teaching agriculture makes the students understands the importance of living things, especially animals, livestock, crops, trees, fishes and food. How food got onto their tables and clothes get onto store shelves. Agriculture education helps students get perspective on their lives and the world around them. Ms Zhiem once said that it is the parents’ responsibility to get their children/students who love agriculture to support them on their choices. If the young ones is hooked in to agriculture, support them.

Agriculture plays a very vital role in the entire life of a given economy. We need to eat or drink, we need agriculture, we need medicine, we need agriculture. We need shelter or a house to live in, we need agriculture, or simply writing using pencil, we need agriculture. Aside from providing food and raw materials, agriculture also provides employment. Agriculture can be a source of livelihood, many people rely on agriculture as a mean of living. Agriculture is a supply of food or a fodder, it feeds the people and also feeds the livestock. Without agriculture, the world is nothing, agriculture feeds the world.

Students that grows in the farm or have interest in crops, livestocks, fishes, horticulture, agriculture may pique their interest. Agriculture cultivate a variety of career, depends upon the field of specialization. Preference for crops, fisheries, animals, soil, can dictate whether students will manage a farm, ranch, fishery, or even being a soil scientist or agricultural engineer (a professional where it focuses on the systems, process,
machineries and the workflow of the farm) and a lot more career opportunities that majoring in agriculture may provide because of its broad course.
