BIOLOGICAL SCIENCE-CENTERED FIELD TRIPS
By: Ma. Renalyn B. Ramos-Teacher Applicant

Biological science class can provide a more fruitful learning experience to the students by going to nearby community facilities in order to enrich knowledge and to experience the actual world.

An occasional field trip may be employed by the teacher as long as there is permission from the right authorities and whenever the prospective area of interest is available and accessible.

Having the opportunity to visit educational places may heighten learning and can make studying more productive and dynamic. The following field trip activities may invigorate the students learning, interest and experience:

A visit to a local biological science museum. It is much better if the biological science students visit a museum. Here, they will be able to see different specimens, preserved species, tools and equipment being used in biological procedure. The learners will be amazed of what will they see most especially those rare species that are found in the locality.

A visit to a botanical garden. Being surrounded with plants and flowers is pleasing to the eyes. It is a wonderful experience for the students to see and even touch flowers, leaves, fruits and stems of varied kinds of plants and flowers which are making the surroundings beautiful and fresh. The experience of visiting a botanical garden is an exceptional activity that biological science teachers must consider.

A visit to a nearby zoo. The visit to a zoo near the community will likely create excitement to the students since they will have a close encounter with various animals in the wild. It is also a great opportunity for them to see these valuable species for most of them are already endangered. Being in the zoo is also being in one with nature.

A visit to a farm. The trip to a farm is also worth-doing for it shows how the plants provide us with the food that we consume every day. Farm life gives inspiration to students since it displays the simplicity of life having united with nature and the simple way of life surrounded with biological matters like trees, plants and livestock animals.

A visit to a research laboratory. A research laboratory is highly educational for the students encounter people who are experts in biological science. Moreover, they will also have a chance to visit high-tech facilities which are concerned in doing researches on biological concerns.

Biological science can be more different and out of the usual once the biological science-trip activities will be realized by the teachers and students.

Growing with the awareness of the community amenities involving biological science is such a great undertaking.

Let the class be productive by means of the real biological science-centered field trips.

What makes a child gifted and talented may not always be good grades in school but a different way of looking at the world and learning. – Chuck Grassley
