CLean and Green Activity

by:
Cristine D. De Lara
Teacher III, Pilar Elementary School

Environment is inhabited by living and non-living things. It is essential to keep our environment clean because we get fresh air, reduce pollution, and many more. A polluted environment leads to a bad situation in the society as well as arrival of diseases. The program toward clean and green does not entail that traditional methods are scarce or have created unsafe conditions. Instead, it can be viewed as simply taking the next step beyond current approaches to further reduce the destruction of our natural resources. And its impacts on the environment while continuing to maintain and improve the health, comfort and aesthetics of our surroundings.

A clean place is said to be safe. A place like school that is free from trash and harmful chemicals is safe and healthy place for the pupils to learn and staff to work well and also for the people who visit the school.

The goal of this activity is to educate the children the importance of a clean and safe school that is good for the health and well-being of everyone, also to impart in their hearts and minds the vital role and value of trees and other natural resources in maintaining the ecosystem and the importance of our natural resources and how it should be taken care of. Also its active involvement in relevant tree planting and greening projects.

The Clean and Green Activity promotes and implement the proper waste segregation from biodegradable, non-biodegradable and recyclable materials. Use the recyclables waste materials into more useful thing. Clean the school area such as canals, school garden and corners of the school. Plant trees, vegetables and ornamental plants in different areas of the school. This activity is one of the most useful and beneficial activity.
