In the age when everything revolves around social media and the internet, there arise different types of dangers. Today, it is believed that a person faces more danger scrolling through the internet than walking in the streets. The social media are plagued with cyber predators that uses click bait to lure people. Different perpetrators that prey on unsuspecting victims, most especially young individuals that are curious about things they see online.

Although most of the cyber interactions happen at home or at computer establishments outside school grounds, it is still vital that proper information should be learned within the classroom. The topic of potential cybercrimes like bullying, identity theft and crimes that use the cyber space as a platform must be taught to students in order for them to be aware and well-versed.

This will help them be more cautious in dealing with whatever they see or encounter online. This information will keep them away from shady websites and other unprotected pages that can be home of pedophiles and other psychos and may be the fine line between safety and tragedy.

Throughout the years, there are many recorded and punished cybercrimes abroad; unfortunately, the same cannot be said in the Philippines, although we are getting there. In the future there might be more improvement in laws and regulations regarding cybercrimes. Well, there will better be, because the technology age is still going forward like the speed of light.
