DEVELOPING ENVIRONMENTAL AWARENESS
Written by: Beverly D. Tongol
Teacher III
Old San Jose Elementary School
Dinalupihan, Bataan

The school teaches the children to have environmental awareness. Through this, the students will learn to respect, protect, preserve and love the environment more clearly Mother Earth.

Learning about the adverse effects of abuse in the environment like climate change, global warming, scarcity of water, pollution, droughts and among others are indeed urgent for the situations are very alarming.

Developing environmental awareness among the students in the school is very important for them to contribute in saving Mother Earth from destruction.

The teachers have to emphasize environmental awareness and protection primarily through values education subject. This is the first step that the school must undergo in order to develop environmental information among the learners.

The integration of lessons about environment in various learning or subject areas is also feasible to do. This is also stressing how important the environment to us and we need to take care of it. This is strengthening the knowledge on the protection and preservation of the nature.

Creating an organization in school that showcases campaigns and awareness for what are happening in the world at present is good. Having an environmental club in the school is a healthy way to spread the care and love for environment.

The teachers may also lead the students to environmental movies and videos that are realistic. In this way, the students could relate to the real scenarios in the world at present. The natural catastrophes are very awakening in order to enlighten the people.

Having school related activities like poster making, slogan contest, essay writing content and others are also helpful in developing and cultivate environmental awareness among the learners.

Conducting symposia in the school is also a good means to educate people regarding environment as in learning how to protect and preserve not just for our generation but for the future.

Knowledge in environment is important and the school has the obligation to teach about it.
