DEVELOPING MODULES IN LEARNING DURING PANDEMICS

by:
Rodelio R. Dionisio
Teacher I, Samal South Elementary School

Year 2020 has created a memorable experience to every human being by delivering a big difference before pandemics. Although many things have gone through. People were not surrendered on what pandemics resulted to us. Education is education, no matter what happens. The country will struggle and fight for COVID-19 just for the sake of human knowledge that need to be inculcate of every nation. Globally, over 1.2 billion children are out of the classroom, “according to experts.

Time flies, but still, education will be on top of the choice of the Filipino who raised good quality education. People involved in education formulated and thought on how to get in touch with learning even without going to school but still it has learning. “Ang Kaalamang natutunan ay di maagaw ninuman”. Learning as individual is much needed rather than to stay at home without learning.

People around the world have been waiting for the vaccine for their safety and the community as well. Developing modular learning during pandemics is a big help to every student. Yet more adjustments are needed to overcome. Hence, Filipinos are trying to advocate this type of learning. Budgets, teachers, materials, and sanitizing materials were allotted in every school. Most people were adjusted to this kind of learning such as parents, teachers, students and professors and also employees in the Department of Education.

The field of education in the Philippines has undergone through temporarily adjustments
Modules were made by the teachers as writers, illustrators, content editors and lay-out artists. Modules were made by a quarterly session from 1st to 4th quarter headed by the higher official in the Department of Education.

Modules were distributed and printed and be delivered in all schools wherein every student needed this to read and answered the modules. Modules were given During Mondays and answered by the students with the help of the parents as well as teach them some of the lessons. Modules will be returned in schools during Fridays.

The instructions written in the modules were skills-oriented. Through these modules’ students will become busy on the modules they have given to them because of the task given and the performance tasks given in the modules.

Through these learning modules, learners will develop their skills in reading, and solving a problem and experimenting oneself through exploring depending on the instruction given by the modular learning tools.

As COVID-19 arises, changes will positively happen globally and technologically in education but as learners and educators should strive for this new normal and should take as a new challenged for living.
