DIGITAL LEARNING

by:
Jelly P. Reyes
Teacher III, Orani South Elementary School

In adherence to the fast-changing world and in line with the modern technology, digital learning is now being adopted in various schools in the country.

Digital learning is a kind of learning that is accompanied and supported by the latest world technology. It is a type of educational practice that the modern teachers embrace at the present time in order to redefine the way the teachers transmit and deliver the lessons to their students in the day to day class interaction.

Digital technology lets the learners absorb the ideas quickly and fully make a catch of various theories, concepts or ideas. The students does not need to browse a lot of books in order to search for information but instead through the help of internet and other computer software applications, things are searched quickly and easily.

Though digital learning the students may use the desktop, laptop and other forms of gadgets as allowed in the school in order to apply digital learning in the quest for further education and progress in studies.
The teacher may also find ease and convenience in digital learning because acting as the facilitator in the class would be justified. Instructions are made easier, lighter and clearer since the tools in digital learning would easily transmit them to the learners.

Digital learning makes all good possibilities in the realization and accomplishment of better and more brilliant education among the group of learners. More activities and worthwhile undertakings will be attained at a minimum of time through digital learning.

The gadgets and tools of digital learning are readily available at present and they are here to be utilized for useful and fruitful purposes.

Digital learning is here to stay and will continue to grow! It is time to embrace the modern means of education through digital learning.
