DIGITAL LESSON; A RESPONSIVE INNOVATION AMIDST PANDEMIC

by:

Ryann Ramos Singian, EdD
Master Teacher I, Dinalupihan Elementary School

Amid the COVID 19 pandemic, the Department of Education (DepEd) maintains that education must continue despite the so-called "new normal," although learning should take place even without the usual scenario of going to school, which is why different learning methods have been introduced through DepEd Bayanihan.

One of these is the conceptualization of a Digital Lesson which is a material that will serve as an alternative platform for those who cannot make use of online learning, but who can learn best through reading and writing, audio and visual means.

DL contributes to the continuous delivery of quality education through online and offline platforms. It also ensures more meaningful learning experiences through the use of different strategies and involves activities and direct learning experiences that actively involve learners in an interactive way of learning to gain knowledge and understanding.

People who work with students should have a clear understanding of the nature of the learner to be more effective in dealing with them and their problems. Thus, digitizing the lesson will provide a pleasurable and interactive means that will add to the interest of the learners, even without a learning facilitator.

This innovation will provide learners with an opportunity for advanced reading and learning. It will also reinforce the desired behavior and keep learners motivated throughout the activity. This material will provide the broadening of horizons, the development of new skills, and the contribution to the development of the learner. As a
result, by participating in this activity, they will acquire and develop important skills, such as commitment, initiative, self-reliance, and all the interest to be explored.

Digital learning can help children to leapfrog to a brighter future, giving them more opportunities and choices to build the literacy, numeracy, digital, future life, entrepreneurial and job-specific skills they need.
