DON’T WASTE IT, JUST TASTE IT!

by:

Cristine D. De Lara
Teacher III, Pilar Elementary School

Water is very important to human life and progression. It is one of the element on earth that gives life, power, and satisfaction. Therefore, water conservation is a serious topic to be discussed along with educating people. The significance of educating people is very timely now because of the growing population, henceforth the scarcity of having a safe and fresh water is at stake. The question now is how we start instructing our community. First, from homes we learn to conserve by our parents who taught us to do conserving water, electricity, and other primary resources. As a child grows up, he will be starting schooling, so then the school as [an] institution of learning will be now responsible to teach the child in more and depth perspective of conservation. How do schools do their duties as [an] educators?

The schools adhere on the issues and relevance of water conservation. Continuing education is always observed and practiced not only academically but also in aspect of social responsibilities. Part of the academic designed platforms include an extensive and intensive education on the basic knowledge on different subject areas and values formation; which constitute one of the essential learning objective is the conservation of natural resources. Thus, instilling good manners, behaviours, and stewardship have been integrated in all subjects especially in “Edukasyon sa Pagpapakatao.”

How do we realize it? Practically speaking, we teach them what are the do’s and don’ts. We teach them in an ordinary classroom set up whereas; a teacher educating his/her students on how to conserve water and their duties and responsibilities to do conservation. After relative discussions have been emphasized and expound, the actualization is the substantial part of learning. So how do we guide them and see to it
that they practice such imparting of knowledge. In school, the basic rule is a must and that is to conserve by doing the habit of conservation effort. Every pupil is not allowed to waste water, electricity, food, and even monetary. Actions are very important thing to consider in matter of conservation.

Schools have vital roles in educating people about the importance of “water conservation.” Good leadership comes through abiding the laws. Always commit to teach our students about patriotism, self-discipline, love and care for nature, and above all love for God.
