EDUCATING THE 21ST CENTURY LEARNERS

by:

Jelly P. Reyes
Teacher III, Orani South Elementary School

The 21st century learners deserve the best from their teachers and that is the reason why teachers think of the brilliant means to serve them to the best they can.

To teach these promising school learners, the school needs to employ the most ingenious ways in order to address their needs and meet their expectations:

**Teaching with the latest technology and multimedia.** The 21st century learners are being taught with the use of computers. Moreover, different forms of multimedia like television, internet, radio and the like are also incorporated in teaching and learning.

**Teaching with collaborative strategy.** This kind of teaching strategy permits the learners in sharing their auspicious ideas and freely tolerates their points as to arrive to a common tenet and accomplishment. This is empowering their minds to tackles things freely.

**Teaching with inventive instructional materials.** There are numerous instructional materials that are prevalent nowadays. These instructional aids should fit the learner and the kind of topic in each subject. Instructional materials give color and vibrancy to the education of the learners.
Teaching with critical teaching method. The 21\textsuperscript{st} century learners does not simply absorb what they hear, they also use their critical thinking in pursuit of clarification and verification of knowledge and ideas.

Teaching with discovery method. The learners of the 21\textsuperscript{st} century are taught through discovery method to further find the truth and the causes of the effects. This leads to a more inquisitive learner who tries to search for the ultimate truth.

Teaching with real objects. The learning experiences are more realistic if real objects are used in the classroom. The learners are indeed exposed to reality.

Teaching also requires digital literacy. The kind of education at present requires digital learning. Students are taught to learn by the power of computer technology and other related technology done electronically.

Teaching also includes problem-solving. The students are trained to solve not only the problems in Math and in the school but also real-life problems.

Truly, education is rapidly changing to suit the 21\textsuperscript{st} century learners who deserve quality of education.
