EDUCATION MARKS A KEY TO A GREAT FUTURE

by:
Mark Jerald S. Mendoza

Education is the key. The human is a lock. The thing that everyone needs to do is to unlock their full potential to enhance, improve, and boost their abilities and knowledge as a human being to attain a better future since, education is one of the most valuable and essential treasure in the life of every people in this world.

In the areas of moral, intellectual, social and spiritual development of the child shows usefulness in any viewpoint of education. This development to a great extent is a function of the quality of the educational system. It plays a vital role in the development of human capital and is linked with the well-being of an individual and opportunities for better living. It provides the knowledge and skills’ acquisition that allows an individual to be more productive and enhance the way of life. Individual’s improvement on their productiveness focus on the new origin of gaining which improves the economic development of a country.

Nowadays, students use different varieties and classes of resources for their academic activities and performances in school. Those resources consist of printed materials such as textbooks and also internet that contain electronic books that can make their life as a student easier and stress free.

Libraries and archives arrive to give information which is mostly hard-to-find, scarce, expensive or unique material. Lack in the source of information is the guidelines of the new generation libraries that we also known as “modern libraries”. In this modern world where modern libraries are born, the Internet that is playing a vital part in imparting knowledge through its ‘easy-to-access’ and ‘ready to furnish’ services to youth. It has great potential to revolutionize the process of learning at academic institutions, and enhancing the skills of students regarding the Internet has become a current requirement in the present academic order. Computer
knowledge and devotion to using computers for academic work has had a significant influence on student learning. But unfortunately, academic activities are increasing on the Internet; however, since Internet misuse is also rampant, negative academic activities cannot be ruled out. Class assignments and research papers can be easily plagiarized in subtle ways. Easy access to information and relevant materials makes students less likely to tolerate reading long narratives and absorbing real contents. Instead of going into detail they depend on summarized contents, and many are satisfied with this superficiality of knowledge.

In general, we are now living in the information age where easy to access in different Internet resources in just a few clicks away and to different resourceful libraries that comprises of different textbooks. Through the provision and sustenance of those resources, most of the problems and struggles of students regarding their academic and school activities is easily to resolve. It also improves and enhances their knowledge as a student because through the help of those resources their learning and insight will expand and develop.
