EDUCATIONAL TECHNOLOGY ADVANCES IN DEPED-BATAAN

by:

Ivy M. Caraan
Teacher II, E.C Bernabe National High School

The ZzishHub was introduced towards Bataan last September 24, 2018. It is a data-controlled instruction application platform which originally came from London. It offers a learning atmosphere with user-friendly graphic user interface for an educative yet fun learning experience for teachers and learners. It gamifies learning inside the school while giving the teachers a prompt overview into the learner’s current status in the mastery of a topic in a certain subject. Indeed, it is a high-tech aid in order to lessen the burden of the teachers. In addition, it assists the enhancement of the learners’ capacity when it comes to education.

As educators cry for support due to the amount of paper works that they need to accomplish, Zzish comes in to the rescue to lessen the clerical tasks of teachers by 85% to 90% as said by Rosemarie Sison (Philippines Country Manager - Zzish Ltd. of London)

Through the said platform, the usual checking of test papers by teachers is now in the past. Because even while the students are still answering the questions in their handy phones or computers, educators are able to view the learners’ progress just by clicking on some icons in the said platform. By which, the traditional way of doing the item analysis is no longer needed. With that being said, saving the teachers’ time and energy.

As well, the needs of the learners will be addressed properly due to the features of Zzish when it comes to identifying the least learned topic of the learner and which resource could best help them to master the topic — all that at the teacher’s fingertips.
Also, this technology does not require to download and install a specific application on the device of the teacher and learners, they could simply access the platform through Google Chrome or Mozilla Firefox.

Contrary to common belief, the user does not need to have a high-end device to access the said platform. As long as the device, either IOS or Android, is connected to the internet then all is set.

So, say goodbye to boring classroom tests and say hello with the use of digital assessment tools that can be plugged into ZzishHub.
