EDUCATIONAL TECHNOLOGY AND THE TEACHERS

by:
Mylinne S. Ronquillo
Teacher III, Jose. C. Payumo Jr. Memorial High School

We all know that not using the modern and trending educational technologies (Medias) now is just like limiting your learners to see the unseen world of knowledge, ripping the ticket to a world tour and breaking the lenses of their telescope to see the outside world. So educational technology and the teachers must collaborate in filling the minds of our future world builders.

The role of educational technology in teaching today is of great importance because of the use of communication and information technologies. With the help of various technologies for distance education, the Internet, teachers, and students themselves, we see the advantage of educational technology.

But can educational technology replace the roles of the teachers?

Definitely it’s a NO!

Educational technology cannot replace the love and care teachers can give in every learner. Being the second parent to those who needs a mom and dad, a saviour to those who needs a help, guidance to the learners that lost in the right track and future builder to the learners who wants to have a great future. A television can’t tell a learner if he/she is doing well in a way a learner can appreciate the appreciation of a teacher.

“Education technology is just to enhance and arouse learning, but a Teacher is everything for the learners to learn to be a human”.
