EFFECTIVE TEACHING STRATEGIES

by:
Araceli T. Pascual
Teacher II, Balsik National High School

Teaching strategies is a method used to help students/pupils learn and be able to develop their goals in the future. Teaching strategies also identify the different learning methods to enable them to develop the right and best strategy to the students (Armstrong, 2013). It is important to have lots of teaching strategies in your toolbox as a classroom teacher because particular strategy that works well with your group of students one year that won’t work with your students the next year.

Proper teaching strategies are important in order to achieve the learning competencies of the students. Each teacher must runs his or her classroom differently, so it is important to decide on the procedures you need to run your classroom smoothly and then teach students the procedures of your classroom. What age of the students, by simply instruct the procedures on the board is not enough: procedures is very important and must be taught, practiced, and reinforced throughout the school year (Teacher Tool Kit, 2019).

Here are five (5) top ideas for you to use in teaching in your classroom according to Cox (2018):

1. Cooperative Learning- also called small-group learning, it is a strategy in which each groups of students cooperate, sharing their ideas and work together on a common task (Teacher Vision, 2019).

2. Inquiry-Based Instruction- By asking questions and working together to solve the problems, students get to be involved in the learning process. The each of group of class can work together to determine the answer. The students do the work to
discover the answers on their own, they remember the concepts for better understanding (Goodwin, 2018).

3. Differentiated Instruction- allow teachers to engage each student by accommodating to their specific learning style. It is also tailoring instruction to meet individual needs. The teachers used differentiatie process, or the training environment, the utilization of ongoing assessment and versatile grouping to makes a successful approach to instruction (Tomlinson, 2019)

4. Graphic Organizers - It is summarize the information in a concise manner. Using a different visual aids in order to the students get to see the information in a new light. This helps them organize the information in their minds, so they can better grasp the new concepts (Goodwin, 2018)

5. Utilizing Technology in the Classroom - Learning can become more interactive when technology is used as students can physically engage during lessons as well as instantly research their ideas, which develops autonomy (Quizalize, 2018).
