EFFECTS OF TECHNOLOGY ON EDUCATION

by:
Florence R. Nazareno
Teacher III, Pantalan, Luma Elementary School

Teachers in the pre-technological period didn't have a lot of resources to help them improve their teaching. To make the learning process simpler and enjoyable for the students, they relied primarily on the blackboard and chalk. Teachers, as the primary source of knowledge, stood in the middle of the room, giving lectures to students who listened passively. In the technological age, however, classrooms shifted from being teacher-centered to being student-centered.

This resulted from a desire to concentrate more on the students. In a student-centered classroom, the learning burden is placed on the student to break them out of their shells and teach them how to become self-sufficient. Teachers aim to engage students and give them a sense of freedom by using the many technical resources at their disposal to make the learning experience enjoyable, interactive, and informative for them.

Technology has altered not only how teachers deliver lessons and how students learn, but it has also made education more available to millions of students through online classes and resources.
