EQUITY AND EQUALITY

by:
Jho Alisson Hil L. Macalinao

The primary foundation of a fast-developing nation will always focus on the kind and form of professionals it produces. These professionals contribute significantly to the progress and development of a country's sides and stages. Building a high-class nation's professionals has something to do with how, when it comes to education, they get and grab their standard's skilled degrees. This will concentrate more on producing excellent individuals of knowledge who are deemed a high-class country's primary designer. A good and firm education system must be the primary secret of generating such brilliant individuals. Every instructional system has a significant effect on a country's foundation's growth and development.

Equity in education is a measure of success, equity, and chance. This is often associated with the excellence of the educational system of one's country. This equity in education will lead the country to a well-educated population that is vital to its economic and social development. A higher education level means higher earnings, improved health and longer life. It is therefore in the interest of the nation to guarantee that a broad range of instructional possibilities are available to all children and adults. The increasing importance of educational equity is based on the premise of the degree of an individual that will be directly associated with the quality of life that he or she will be living in the future. Thus, a system of education that adopts firm educational equity is also a firm and solid basis of mankind: fair, just, flourishing and prosperous.

A pre-requisite for learning and human development is high-quality education. This is, in particular, a serious challenge for countries with restricted resources where educational systems are prevented from functioning normally. Educational quality relies on what kind of schooling and private characteristics the teacher has. Excellent educators are vital to a well-adopted education system, so the country's capacity to enhance the quality of teachers and other academic stakeholders is crucial throughout this phase of acquiring a high standard and high-quality
education. Equity and quality are the best performing instructional systems. They offer access and possibilities for excellent and equal quality schooling to all people. Investing in high-quality education provides equal opportunities for all under a certain educational system is the most lucrative instructional strategy.
