Teacher III Orani National High School – Main

In this time of pandemic, there are terms in the field of education that became popular and eventually became the evolving trends. Adopting to the needs of the situation, these things became acceptable and applicable in order to survive and continue the school instructions, thus these paved the way in shifting the educational landscape.

Initially, Self-Care, is one undeniable trend in the school community. Because of the emergence of the pandemic in the world, the school authorities, teachers, students, parents and stakeholders became well-aware of the important of safety in terms of health. These people learned to appreciate the value of self-care for if you are following the safety health practices you are doing it for yourself and you are also protecting others. Self-care is giving importance to your health for you not to affect others.

Another very important trend is the LDM or Learning Delivery Modality. In place of the face-to-face interaction, the LDM offers ways to realize the teaching-learning process between the teacher ad students. Having the varied modes of learning would still continue the education of the students even in the convenience of home.

Modular Learning is said to be the most preferred modality in the field of education at present. Most parents chose this kind of learning for it available and economical. The school provides the self-learning modules and the students do not need to go to school regularly. The parents get modules and submit the answers of their children to their respective teachers.
As associated with modular learning is Self-Learning. This means that the students must answer the modules by themselves. This promotes independence and confidence in each learner, doing specific task by oneself. Self-learning entails the reading, understanding, analyzing and answering of learning materials and activities sheets independently.

Blended Learning is also another trend in education. This connotes a combination of two or more modalities. The students may greatly benefit from this because the two or more methods are being utilized in developing and enhancing their knowledge, skills and even the maximum potentials.

The Genius Hour is justly a new educational way that permits the students or learners to spend time for an hour each day in doing a particular activity or task in their own respective paces. This engaging technique promotes creativity and freedom in them, thus thereby winning their love and passion for learning. It is just like having a quality time in studying or learning.

The Digital Citizenship refers to the capability of the learner to utilize technology and Internet effectually and successfully. This is the practice of digital skill wherein the learners are moving from traditional to modern way of studying, enjoying the comfort of their houses.

The Social-Emotional Learning (SEL) is another significant trend that is applicable during pandemic. This works on for the social-emotional concerns of teachers and students. The students in particular may have experienced stress or hardship in life due to COVID 19, the teacher is then encouraged to apply SEL to support them in promoting their well-being.

These are some of the evolving trends at present in the field of education and they are helpful to continue and support the education of the youth as they search for learning even during these hard times.
