FEATURES OF LEARNING MANAGEMENT SYSTEM IN NEW NORMAL

Evelyn R. Ramos
Teacher I, Capitangan Elementary School

As the COVID-19 virus continues to pose a threat to everyone, the world is thrown into chaos. To protect students, teachers, and staff from infection, schools around the world have temporarily closed. According to a UNESCO study, the pandemic has affected nearly 1.2 billion students in 143 countries. However, learners' can continue their education due to the rise of online learning during the COVID-19 pandemic. Schools are moving away from the four walls of their classrooms and embracing the digital environment. The LMS or Learning Management Systems are software solutions that help monitor, and report on online courses and training programs. These systems are also referred to as learning management systems. It functions as a virtual classroom, allowing teachers to interact with their students and conduct online learning activities (Paradiso, 2021).

A learning management system (LMS) is a web-based tool for planning, implementing, and evaluating a particular learning process. It is used in eLearning and consists of two elements: a server that performs the basic functionality and a user interface that teachers, students, and administrators operate in its most basic form. Teachers can use a learning management system to create and deliver content, track student participation, and evaluate performance. In addition, students may use interactive features such as threaded discussions, video conferencing, and discussion forums through a learning management system (Brush, 2021).

The LMS is a platform for delivering online and blended learning to educational and corporate learning institutions. It usually includes a long list of necessary features. Students can access the LMS at any time and from any location. Students can access...
courses whenever they want, rather than at a set time, allowing them to learn at their pace and maximize their education. It can benefit even those who do not have time for traditional learning. Students can start learning right away by logging into a web interface using any mobile device. They can complete and deliver coursework, track their progress, and maintain an up-to-date calendar of assignments and tests. They can also learn from and interact with some of the best professors and subject-matter experts on the planet. Teachers can create quizzes and upload course materials that can be reused indefinitely. Teachers and instructional designers can provide students with real-time educational content and immediate feedback based on their preferred grading system. Teachers can also communicate with students and use the reports and analytics features to track and analyze their progress. Multi-tenancy is a unique feature of LMS that allows schools to form consortiums by pooling their financial resources and sharing the costs of implementing an LMS. Even though they are using the same platform, participating schools can have their own identity and branding on their websites. They can choose to collaborate and share resources, processes, and practices (Obana, 2021).
