FOOD PRODUCTION, RESPONSE TO SUSTAINABLE DEVELOPMENT

by:
Lani G. Licup
Master Teacher I, Sta. Rosa Elementary School

In response to sustainable development of every school and to raise more awareness about health and nutrition among pupils, teachers and parents a Gulayan sa Paaralan in response to nutrition awareness. Hunger and malnutrition are two mainly problems that affect school children. It will not only benefit the pupils but also the whole community as well and their family regarding sustainability because they can share what they learn in their respective place. Nutrition plays a very significant factor in educative process of child as a learner and it will greatly be affected. There is a need to inculcate and deepen appreciation among the youth the importance of agriculture not only in our economy but also in our life.

To give emphasis on its significance we established a seed bank in order to have a ready source of seeds and seedlings for planting the whole year round. Because of our limited space for planting we use tires, drums, bottles and used plastic cans. All sections from grade level planted different crops of vegetables such as eggplants, okra, upo, sitaw, pechay tomatoes. It will also contribute for its feeding program to sustain the said feeding program and to address malnutrition. The excess vegetables harvested could be sold by the school for income generating project. As a matter of fact, this livelihood skills that the learners will acquire from the school can also be applied to their respective households for their extra source of income.

Here, we give emphasis on values of good health, industry, love of labor and caring for others through cooperation.
