GAME CHANGERS: BEST HUMAN DISCOVERIES

by:
Anna May Pantaleon
Teacher III, Justice Emilio Angeles Gancayco Memorial High School

Humans are rational beings and the highest form of animals. We think and invent things and bring them to good use. Hundreds of years have passed since the biggest breakthroughs of human knowledge that made our lives easier. Even from our current millennium, a lot of discoveries have changed the way we live. Here are the best ones of what we have found out so far:

Medicines: Before inventing medicines, people used bloodletting to remove foreign bacteria from their bodies. This is not so efficient since we also need blood to live and losing a lot of it will be harmful to the body as well. Just imagine if we still haven’t discovered a way of fighting sickness, most of the human population might not be existing by now and the mortality rate will be off the charts. The discovery of medicine has given people hope of living despite the also-adapting population of bacteria and viruses.

Airplanes: Traveling has never been so fast after the discovery of the airbuses. Before, people used to wait for months before arriving in a new country via ships which makes you feel sick a lot. But now, we can go across the globe for just hours. The discovery of airplanes has also paved way for fast trade also. It opened a worldwide exchange of products from country to country.

Computer: The first-ever computers were used for calculations only, but look how far we’ve been through. Modern computers can almost possibly do everything! There is also a new advancement in the computer industry called AI or artificial intelligence. It is programmed to imitate the human brain, which is a rational brain that can troubleshoot
and find ways through problems. The computer has helped people in many ways including documentation, literature, media, and research.

WiFi: Wireless Fidelity or known as WiFi is such a big help for people. It paved the way for long-distance communications and quick transfer of information. People are just a few clicks away from knowledge found from the other end of the globe. WiFi has connected people of different countries. It brought a fast-paced life to the people.

Smartphones: This is what we can call ‘millennial discovery’ as it gave birth to the current world that we live in; a world that revolves around multimedia. With just a few taps, you can access the internet or social media and find out what is happening around you. You can also take pictures with it and upload them instantly for the world to see. And not to mention that you can also play games with a touch-capacitive screen. Smartphones have brought almost every tool you need in your pocket.

Technology had its good run so far despite the negative effects that happen due to the lack of discipline and control of the users of the said tech. It made living so easy and innovative. The changes in the technology trend also change our lifestyles. Amid all these innovations, humans still have space for new ideas so brace for more game changers soon in the next years!
