GETTING THROUGH MATH EXAMS

by:
Janet A. Lingad
Teacher III, Bonifacio Camacho National High School

The digital age has greatly influenced the new educational era. The schools are now inclined with what technology offers in order to attain advancements and innovations in teaching as well as in learning.

The digital age brought different educational and technological breakthroughs that raised the quality of instructions and the kind of students and graduates. Embarking in the new technology, the educators and students of today are well-aware of the different things and happenings in the world and even beyond.

It is just right to highlight the technological advantages during this period.

Technology paved the way for the existence of mobile gadgets, laptops and No one could ever question that taking a Math exam is not a piece of cake.

Memorization prowess is needed in other subjects but in contrast to Math that entails studying strategies, theories, and its application. Because of Math, students acquire. However, Math is a progressive course. Contemplate first until you arrive at concept that you exert effort with, labor through examples, and then toil on questions until you get them right.

Sweating for Math pen and paper assessments is one perceptual jump after the next, with a time limit comes after another. It is a typical picture that pupils cram when examination date is coming. Granted that many students cried their heart out when taking a Math exam, it is still our calling as educators to offer a hand to lighten their burden in taking the exam.
Here are a number of practical modes to make Math test taking less difficult. First, leaf through all your tests in the past question by question. If you answered it wrongly, have patience to answer it again without looking at the correct answer. Check your response and do it again until you get it correctly. At the occasion that all the modifications to your mistakes are minded, retention of the Math problem and its solution occurs.

Second, dare to answer questions that you are not familiar with. It is commendable to push yourself with something that is new to you. Doing so will cement your understanding about the topic.

Third, consult the internet. In this technology know-how realm, internet provides all information. Looking for the right answer as well as watching how a problem is solved procedurally is provided by the internet. You may watch if you wish.

Fourth, call for assistance. Accepted that you had exhaust all your effort, still, you have not come up with the correct answer, it is perfectly fine to seek help. Math wizards among your peers and even your Math teachers are welcome to share their expertise about the topic. You just need to ask for it.

In conclusion, it is a fact the Math assessments are difficult. But nothing is intolerable for a student who toils hard to pass the exam. After all, if there is a will, there is always a way.
