School Based Management (SBM) is a Dep Ed thrust which aimed to decentralize the decision making from central, regional and division levels to individual schools, thus uniting school heads, teachers, students as well as parents, the local government units and the community to promote quality education.

Since the main goal of SBM is to improve performance and students achievements this leads empowering school heads to mobilizing the community as well as the local government units to invest time, money, and effort in making the school a better place to learn so through SBM creating partnership with the stakeholders become an easy task.

School Based Management serves as a catalyst to build better relationship between the school, community, and stakeholders working towards the welfare of the learners. Understanding the roles, duties and responsibilities of every entity in SBM can lead to better and functional organization gearing towards the needs and fulfillment of teaching-learning process.

The linkage between the school, community and stakeholders become stronger hence collective efforts improve the outcome of the educational institution and
develop good relationship between the school and its partners to craft the minds of the youth.

Proper communication between the school and community leaders helps to provide valid information to be utilized in decision making and solving problems involving curriculum and instruction. Good communication with the people in the community will enhance efficient networking towards excellent learning outcomes.

Emerging partnership between the school, community, stakeholders and other concerned individuals nurture healthy relationships and increase support and cooperation in the continuous implementation of the education plan.
