IMPACT ON EDUCATION DUE TO COVID-19

by:
Aika Kristine L. Valencia
Teacher II, Bataan School of Fisheries

Online teaching is no longer an option, it is a necessity. A major part of the world is in quarantine due to the serious outbreak of this global Covid-19 pandemic, and so many cities have become phantom cities, and their effects can also be seen in schools, colleges, and universities. All this online teaching and online learning can be described as a panacea for the crisis. COVID-19 has resulted in the closure of all academic institutions in many countries as a result the education system undergoes drastic changes with the raise to e-learning where teaching is done remotely on digital platforms. The Corona Virus has made institutions move from offline to online pedagogy.

Online learning can be new and challenging, properly managing time, and concentrating on the goals are excellent ways to reach and keep on the track. One research shows that online learning has been shown to increase retention of information and takes less time so online learning will continue to persist post pandemic. This crisis will make the institutions that were previously reluctant to change and embrace modern technology. This pandemic will show us the lucrative side of online teaching and learning. With the help of online teaching methods, we can preach to many students at anytime and anywhere in the world. All institutions must explore different options for online pedagogical approaches and try to make better use of technology to understand the dire need of this present situation.

It can be difficult to shift from face-to-face to online learning, but it is also rewarding. Some may believe that this unexpected transition from face-to-face to online learning would manifest a low-quality education. While others assume that this new mode of learning looks promising and provides students with varied opportunities to
build something that suits them for their education. The integration of the information technology in education will be further accelerated so the student from the remote part of the country also gets the quality education form the teachers form the worlds renowned institutions.

In the future, the existence of COVID-19 will alter education significantly and indefinitely, as we need to be able to adjust to working and learning online for all kinds of reasons and circumstances.

Only time will tell if online classes are going to be a suitable replacement for traditional classes, and if they are, online education services and online universities will increase.
