The field of education in the Philippines has gone a long way. Many changes have been introduced due to the researches that were conducted by the experts. In the school, the school head and teacher may also conduct researches. Through research, the school heads improves governance and the teacher improves classroom instructions and conditions and become more innovative and competitive.

With this, teachers may do better and be more effective in teaching once research is employed. As William Arthur Ward once espoused that “The mediocre teacher tells. The good teacher explains. The superior teacher demonstrates. The great teacher inspires.”

Through research the teacher would be able to identify the problem among the pupils. Action research which is the common vehicle of a classroom teacher in determining the problems of the pupils in the class is very useful.

Research may determine the extent of the problem. By the conduct of the research, the teacher may be able to identify the level of the problem to be resolved. There are ways and instruments in finding out the extent of the situation in the class.

The proper intervention in resolving the problems in the class may be resolved through research. It is best to choose the intervention from the concepts that may be researched from reliable books or sources.
Aside from resolving class problems, the teacher may apply research in searching for the most suitable teaching strategies applicable to the students. By looking at the Internet and reading legit books, the new trends in teaching may be taken.

Learning styles may be researched in order to employ among the pupils. The teacher who is fond of research may increasingly improve the academic achievement of the pupils through researching on the most suitable learning styles for the pupils.

Research is integral in improving the current situation in the class. There are times that the teacher may find difficulty in teaching and engaging in research is one of the best solutions for this may provide useful information.

Through research, the teacher becomes more resourceful and creative to make the teaching learning process more lively and appealing to the learners.

Moreover, the classroom management and pupils’ behaviors are improved through research.

The information and data coming from researches are certainly useful in improving the teaching instructions, the classroom set up and the academic achievements and behaviors of the pupils.
