INNOVATION IN EDUCATION AMIDST PANDEMIC

by:
Diolito A. Ochea Jr.

The current situation due to Covid-19 has been affecting the lives of many people. Not only on the economic growth but also in terms of educational aspects, Covid-19 has been a hindrance for having a good quality education in schools. But despite this, learning should never stop and there is a need of alternatives to be used.

According to the article "How Technological Innovation in Education is taking on Covid-19" by Jeanne Allen stated that Covid-19 has made an impact on how technology would be beneficial for teachers and students as well as the parents while they are at home. It gives them the opportunity to explore more and go beyond their technological skills through the use of different social media platforms. This only means that technology helps and plays an important role in the teaching-learning process nowadays.

In the absence of the face-to-face classes, through some applications like ZOOM, Google Meet, Google Classroom, Messenger, and other social media platforms, meeting with students and teaches as well as parents can be possible. Teaching-Learning process is possible again but there are things that should be considered especially the quality of internet connection. Not all students can afford to buy gadgets and establish a good internet connection so that will be another problem and other topic to be discussed.

To sum it up, innovation in education through the use of technology is something that we need especially this time of pandemic. Using different platforms to deliver the lessons and communicate with the students and parents greatly help in monitoring and giving them the opportunity to still have the learning that they should have despite of the current situation that the world is facing right now.
