INTERACTIVE LEARNING

by:

Eric V. Eugenio
Teacher II, Orani South Elementary School

In this century of modernization, more innovations are flourishing in the educational field. These changes are made for the sake of the educational clientele…our learners. Vigorously, the teachers are introducing worthwhile activities using various instructional devices and other means in order to transform the learning process as meaningful and productive as possible.

Interactive learning is what teachers must provide to the students of the present generation. It is an approach that makes the students engaged in dynamic activities which are contributory in dealing with problem solving, critical thinking and collaborative work which are the latest trends in the educative process.

Interactive learning may also be possible if the teacher utilizes instructional devices in teaching the students. These educational materials are useful in achieving interactive learning among the students since they have useful materials being used in meaningful activities. The combined devices and participation of the learners make it interactive.

The use of the current technology invigorates the learning process for it uses advanced mechanical gadgets like computers, laptops, projectors and the like in presenting the lessons in the most inviting and effective manner. Interactive learning takes place in this case for the schoolchildren learn enjoyably through the influence of technology.
Interactive learning may also depend on the students’ engagement. The willingness of the students is very important since it will be instrumental in dealing with the classroom activities with full cooperation. Learning by heart makes it as engaged as possible in the acquisition of knowledge.

Interactive learning is not just confined in the four corners of the room instead it reaches the outside world in order to realize the essence of knowledge. Going to the school surroundings like the backyard, garden, laboratory room, library, computer room, Math Park, Science Park and any other school facilities may suggest interactive learning among the learners who are seeking for information, facts or awareness.

Interactive learning is what the students have to enjoy for they deserve to actively learn and dearly enjoy at the same time. This will lead to the realization that interactive learning is studying passionately with zest for the students to get the best in education.
