LEARNERS INFORMATION SYSTEM: ADVANTAGE OR DISADVANTAGE?

by:
Jane L. Mason
Master Teacher I, Limay Elementary School

Learners Information System (LIS) - Advantage or Disadvantage? As a term referred “Learners Information System”, it is a system for maintaining the registry aimed at meeting these objectives: track learners progress/performance, provide learner’s information for the better program supervision and planning of the school and learning centers, improve management of learners records, facilitate the incorporation of the LRN (Learners Reference Number) in all records which refer to the learner and generate summary of reports which included the age profile and total enrolment.

From the objectives mentioned above, it really emphasized what advantages it has given to the respective school and to the teacher-adviser who provides appropriate enrollees to section handled and update the correct background of parents and CCT (Conditional Cash Transfer) information of learners.

What about the disadvantages? Is the system always accessible? Is the system accurate in saving files? Who is to blame the one who encodes or the system errors? What is the suitable time duration in encoding data? These are the questions that highlight some of the disadvantages depending on how the teachers experienced it by themselves. How about you? What’s your query?
