MODERN EDUCATION

by:
Conrad V. Gallardo
Teacher III, Bonifacio Camacho National High School

1. Getting into the world of technology has been giving us benefits and pleasure in various forms. People depend too much on its promise that technology will make life easier. For many years of living in the age of computers, this promise has been proven true to its context. Computer is the answer. Computer is life.

2. People in different areas of the world started to realize the significance of computer and the services it may offer in our daily living. It is indeed that computer makes life easier for humans. This notion has become part of most of the demands in community, school, offices, establishment and the like.

3. Let me give an example on how big the impact of technology in our generation. Two teachers are teaching certain topic in MAPEH subject. One is using the traditional way of teaching and the other one is using ICT or modern method of teaching. It's not surprising at all that students will be more interested and eager to learn if the teacher is using modern technology in teaching. Using ICT such as powerpoint presentation, videos, pictures and other means are attention catcher to the students. Using technology in teaching is more effective in teaching-learning process.

4. We would like still remember, though many years ago, when computers are non-existence yet, most of the teachers are using manila paper, catolina, chalk, board and other traditional instructional materials. Now, what you only need is to be a computer literate. Teachers are required to learn of using computer, laptop, projectors and others in teaching.
5. Reports, school form, certificates, lessons, students records, grades and many more are expected to be prepared through Microsoft Word, Microsoft Excel, or PowerPoint presentation. Actually, the whole preparation are done using computers. Certainly, most of the work of a teacher nowadays are computer reliance.

6. Either newly hired teachers or old teachers. Being a teacher is a complex role which requires a range of computer skills. This kind of job is a tangible proof that we are already living in the age of computer, that technology does make our teaching and lives easier.

7. Using computer is not everytime on the side of the teachers. Stress arises when suddenly something goes wrong with the computer and important files can’t be recovered anymore. Starting all over again is the only solution, specially for those teacher who are not computer literate or atleast knew the basic on using computer. However, there are many LAC sessions, seminars and training offered to develop the knowledge of teacher in using computers.

8. As the demand for computers gets bigger and wider, the desire for teachers to be computer literate is also at its peak.
