MODERN TECHNOLOGY A HELP FOR EDUCATION

by:
Cristina N. De Guzman
Teacher I, Arellano Elementary School

Over time we have called 'globalization', and our technology continues to grow and develop. And with the rapid advancement of technology we can say that we are at the same time in the development and innovative technology of developed countries.

Modern technology is one part of a person's daily life. We use technology almost everywhere. Cell phones, computers, laptops, smart boards, GPS systems, and more. All of that comes from technology. It helps us every day, by providing us with information and convenient living.

A computer has helped a lot of our students especially in the aspect of research and discovery. You do not have to dig in sandy books to get enough information in each book. You do not have to overhaul the dusty library to find the data needed in your homework. Just go to google, just type the topic you are looking for, just wait a moment, and you'll see what you're looking for.

May young people learn to use modern technologies towards development. May youth use these educational technologies. Is not it the only treasure that no one can steal? This is the ultimate protection of all life's trials. A well-educated person is a life-conscious person.

We can say that technology is a great help in the development of various aspects of knowledge and education. However, we need to remember that we ought to use it properly. Do not let ourselves abuse the technology. It can bring bad effects to us when it's used improperly.
