MODULAR DISTANCE LEARNING IN PANDEMIC

by:
Alfredo C. Cabanilla Jr.
Teacher II, Limay Senior High School

Modular Distance learning involves using the Self Learning Module that contains instructions to be read and followed by the students. The modules that are sent to the students could be in digital form or hard copy. In this time of Pandemic, the Modular Distance Learning is often done by the schools because of its convenience and considering the situation of the students in terms of their accessibility to the internet connectivity, and distance to the school. This kind of learning before was used by the students with different challenges in attending the classes in face to face such as the students who have serious illnesses, pregnancy and other conditions but now, this type of learning is being used by almost all of the school to deliver the lessons to the students. However, this type of learning is facing some concerns such as the clarity of the instruction inside the module, and the delivery of the lesson in the best way the student could learn. But on the other side, this weakness is being addressed by the teachers through constant communication to the students. In relation to this, the educators send links to the class or have it written in the modules in order for the students to see some videos discussing the lesson to further understand it. Others made their own version of the video as if they are teaching in the normal day of class just like before. Modular Distance Learning still one of the best type of learning in this time of pandemic.
