MONITORING TOOLS FOR STUDENTS

by:
Glezie L. Duterte, Teacher Applicant

Due to covid-19 pandemic, we had a serious problem in education. The great emphasis on high-risk assessment has prevented teachers from getting timely. When a test score issued after a student take test is no longer in a given classroom, indicates that the student did not meet the expectations of the standards, it is too late for the classroom teachers to provide any additional support or do anything about it.

Fortunately, the situation is drastically changing. School is focusing on short-cycle formative assessment to monitor student progress throughout the course of each and every lesson. This way, teachers can stay informed about who is learning and who may need additional help before the end of the lesson and before the first quiz or test occur.

Summative Test (written or in performance task) is a process that used by teachers and students learning it provides feedback to adjust ongoing teaching and learning to improve student’s achievement of intended outcomes, according to Dr. Dylan Wiliam.

There are many ways we can monitor students via mobile communication through text and call, online communications through messenger, IG and twitter. Show care for your students. Let them feel how you support their learning and you are willing to learn their situation. When they feel they are appreciated, they are easy to reach out. They will feel safe.

Student monitoring helps to clear up misconceptions, so learners do not go home and rehearse errors in their homework. Effective instruction gives feedback and adjustments occur, the more likely students will reach the intended goals of the lesson. Over the years, this brings about student mastery of the standards. This dramatic impact teacher practice
helps teachers to know how their students are progressing on a daily basis and allowing opportunities to provide extra support if needed.
