MOTIVATION: A THRUST FOR AN EFFECTUAL LEARNING SCENARIO

by:
Haren Bronia Valencia
Teacher III, Hermosa National High School

Motivation is the mental function or instinct that produces, sustains and regulates every student’s behavior. It is the act of stimulating the students in the actual scenario to get their desired course of action. It also refers upon having the encouragement to learn effectively and efficiently on every classroom that will then lead to provide quality education. And so, therefore, teachers are oblige and responsible to have emphasis on moving forward and the widening in terms of the greater aspect the way they deliver or demonstrate their motivation to their students. In addition, motivation also directs behavior towards particular goals. It determines the specific goals toward which people strive; thus, it affects the choices students make.

Basically students’ needs are the one great priority. Students’ needs relies on the following: better facilities or materials to be administered; attention or recognition; opportunities to show their skills; knowledge; and even their values will also count. Motivation leads to increased effort and energy and upturns the initiation and persistence of activities on the part of the learners. It determines whether a student will pursue a task, even a difficult one, with enthusiasm or a lackluster attitude. That is why, this drive enhances cognitive processing that is actually affecting what and how information is processed because motivated students are more likely to pay attention and try to understand the material instead of simply going through the motions of learning in a superficial manner. As a result, students’ performance will improve. Effort, initiation, persistence, cognitive processing and the impact of consequences also lead to improved performance.
Motive representing the behavior of every student is in the process of motivation, which is certainly undertaking goals to be achieved. These goals can be achieved only through the persistence, efforts and of course the creativity of the teacher to be shown that must be visible based on his presentation. It is also essential that a teacher knows the basic problems when it comes to identifying the strengths and weaknesses of his students for it affects the way he presents his motivation, there is a possibility that his students will not easily cope up upon activities to be done. Teachers have the most power to know how to motivate students because they’re on the front lines. They can influence students in a way that kids can actually understand. For as we all know that the children of these days will only be successfully activated only if the teacher is very good on arguing or driving the students’ motivations that is aimed by a goal or incentive wherein they can be energized and reinforced.

While motivating students can be a challenging and tough task, the rewards and incentives are more than worth it. Motivated students are more excited to learn and participate. Teaching a class full of motivated students is enjoyable for teacher and student alike. Some students are self – motivated, with a natural love and passion of learning. But even with the students who do not have this natural and innate drive, a great teacher can make learning fun and inspire them to reach their full potential. Through all of these, it is truly important and is desirable to push through and give stress on the continuity upon initiating motivation in every classroom scenario. Its effectiveness will be highly acclaimed and qualified based on the outstanding performance which is the result of having the ability on highly motivated students.
