ON BECOMING A VUCA WORLD

by:
Jeniel G. Reyes
Teacher II, Pantalan Luma Elementary School

In order to function effectively in today’s fast-moving and complex environment, leaders must often feel that they have to run rationally to keep still. Thus, one of the biggest problems facing organizations today is making key decisions against a moving horizon.

As clearly grasped in our today’s world due to Pandemic, new innovation such as the rise of the Digital age comes in and disturbs the realm nearly suddenly. Challengers develop from unforeseen junctions. Political and financial conditions shift rapidly, exposing organizations to high levels of risk and despair.

In actual fact, we live in a world today that’s continually changing, getting to be more unsteady each day, where changes are huge and little are getting to be more erratic. Furthermore, it is becoming more difficult to forecast events or predict how they will unfold; verifiable predictions and previous experiences are losing their meaning and are scarcely sufficient as a base for predicting the future nature of things. Our advanced world is more complex than ever. Issues and its repercussions are more multi-layered, harder to get. Accordingly, there is no doubt that as of this writing, we are working in a volatile, uncertain, complex, and ambiguous (VUCA) world.

As a future leader in the academe, we must be mindful of the decisions regarding the constraints that characterize how the organization can function. The increment in volatility, uncertainty, complexity, and ambiguity means that the organization must look for modern introductions and take a new approach to administration. At that point, we can ensure that positive comes about in changed circumstances. The VUCA world
challenges us to discover our right way. We may have to be more involved with people and their needs. Meaning and reason take a central part in organizational exercises.
