OUTSIDE THE BOX

by:
Gloria B. Bringas
Teacher III
Paraiso Elementary School

Lately I asked some colleagues what qualities they associated with teachers that can think outside the box, flexibility, being open to new ideas, and being imaginative were at the top of the list. Creative teachers can bring more to class than just mastery of teaching. They are also knowledgeable in other fields, and can draw learning to students from their own experiences, conspire with other mentor and outside interests. Teaching outside the box makes both students and teachers feel equipped. By being creative, students and teachers are motivated to find new ways to communicate, take risks, and explore.

Teachers must put the students at the core of their own learning as frequently as possible. It can provide more effective results rather than those provided by a less creative mode of teaching. Creative teaching is an approach where barriers become opportunities. Teachers that think creatively know that education is perpetually developing, so they stay in touch with all of the new ways of teaching. The education world is generating new methods and strategies to better extend to all learners. These types of educators try and mesh each subject within each other and exhibit student how they connect with their own lives.

Teachers that are innovative have an enthusiasm for discovering good in every condition. They utilize the standards as a pattern to assist them to discover current creative ways to have an impact on their students. Creative educators will do whatever it takes to be inventive instead of being pressured when it comes to the educational standards.
