POSITIVE EFFECTS OF TECHNOLOGY IN EDUCATION

by:
Maria Cecilia R. Cabrera
Teacher III, San Benito Elementary School

Technology is an advance knowledge of a certain subject or object. It deals more on tests and information given by the computer and online services. It is a vast of activities and data install in a computer. It is also the collection of techniques, skills and methods and process used in the production of goods and services or in the accomplishments of objects. Children now are technology oriented, they can play watch videos, listen to music, downloads and research about the topic they want to get, they can easily gain the ideas, facts and information they want to gather. Even in a classroom situation, technology is very useful through executing the lesson of the pupils. Learnings then can be easily took place in the part of the pupils.

In education we often have the feeling that we are finding it harder and harder to teach our pupils. That’s why we are so interested in something new that might help in the teaching and learning process. Every new tool seems like a possible solution to our problem. It is now very easy for us to find ways in any problems that may occur in any classroom situation because of the internet. Technology is a big help for us. It is an effective tool for teachers as well as learners. It improves human condition and gives program and development beneficial to society.

Aside from having a regular classroom, every school today has its own e-classroom wherein learners are allowed to use the desktops and even laptops. Projectors are also used to make learning more interesting and enjoyable.
