REASONS WHY WE NEED TO GET VACCINATED

by:
Ana Mae T. Peña

It has been more than a year since this pandemic began. Millions of lives were affected. We’ve been hearing news of cases and deaths every day. This is our life now.

People constantly pray for this pandemic to end while the others still think that COVID-19 is not real. But aside from praying, there is also one thing we all hoped for ever since the beginning. COVID-19 vaccines.

For us to fully understand the vaccine, we should know what is it and how does it work.

Vaccines contain weakened parts of a particular organism that triggers an immune response within the body.

Why do we need to get vaccinated?

Vaccines may not be our immunity to the virus but it will help us not to experience severe symptoms that may lead to more complications and even death. In this pandemic, we all have learned to prioritize our health and to be safe all the time. Getting vaccinated is one of the precautionary measures we must do to avoid the virus.

Below are some of the reasons why we should consider getting vaccinated:

1. Vaccine-preventable diseases still exist so being vaccinated gave us protection.
2. Vaccines will help keep you healthy since it will serve as our protection against many diseases and infections.
3. Vaccination reduces the risk of having severe symptoms that may lead you between life and death situation.

4. Vaccines are safe and clinically approved.

5. Vaccines will not cause the diseases they are intended to prevent.

6. Young and healthy people can get very sick too so it is not an excuse to not get the vaccine. Healthy or not, we are all prone to the virus.

7. Vaccines are free. It may become expensive in the future if we are not going to avail it now.

8. When you get sick, the people around you may also get sick and we don’t want this to happen.

9. Your family and colleagues need you. There are people who depend on us and being sick make us unable to help them.

There are enough reasons for us to consider the vaccine. It is not for ourselves but also for the people around us. Protecting yourself also means protecting the people around you.
