RECOMMENDING TEACHING APPROACHES

by:
Anna Liza R. Libao
Master Teacher I, Orani South Elementary School

Creative teaching. This includes a row of visual materials that are colorful and attractive to the eyes of the learners. This helps the student explore the word with the aid of creative art.

Utilizing audio-visual tools. Computer technology is featured in this approach. The child enjoys the wonder of technology as they discover the truth on the things around the world. Audio-visual tools supplement the usual textbooks being used in the classroom.

Real-World Learning. By means of going out from the four corners of the classroom, the teacher leads the learners to enjoyment and education. By going to the library, museum, historic spots and industries, the child’s mind would be widely opened. Indeed, world experiences are exciting and fulfilling.

Brainstorm. The so called brainstorming is another effective approach being employed in the school. The so called creative juices from the minds of the learners are being extracted because they are stimulated to share their own ideas and understanding.

Classes outside the classroom. This is another approach that leads to greater heights. To ease boredom among the students and to create the sense of excitement among them, then conducting classes outside the room having extraordinary activities is advantageous.
**Role Playing.** Though role playing is commonly done in the school, its usefulness is still worthy. This empowers the child for the ability to act out a character that is given. Role play produces young actors in the class and it educates the mind of every individual. Role-playing is truly time-tested.

**Storyboard Teaching.** In order to have clarity in the presentation of ideas, a storyboard teaching is applied. This is very much useful most especially in showing sequence of events in the story. It also shows an outline of the story for better understanding.

**Stimulating Classroom Environment.** A creative and well-organized classroom is stimulating. This makes the learner excited and motivated to learn and to enjoy every minute of the day in school.

These are some of the distinguished teaching approaches that teachers may consider in their teaching endeavors.
