It's always better to have a lots of teaching strategies when you want to become a great educator and want to see if the student are eager to learn and become efficient for the future.

According to Goodwin (2016), that repeating your teaching strategy to the students who are new to your environment are possibly won’t work and efficient. She stated that there are different tips of teaching strategies to become a great educator. If the students are not confident if they are well in the school, written or verbal feedback in individual or group helps them how good making their activities. Its better also to model the activities given to enhance their thinking skills and understand what is supposed to do. Always use activities that will enhance cooperation to promote critical thinking, communication, and problem solving skills. And the best is to have the student teach a new topic, this strategy can have the student new learning that they have didn’t learn.

Learning is the foundation to have a better future. The strategies are always depend on how the student will learn efficiently. Refining new strategies is the best way to refine one’s student future.
