REMEDIAL TEACHING

by:
Michael P. Catro
Teacher II – Pandatung Elementary School

“Every student can learn, just not on an equivalent day or within the same way.”
-George Evan

Each pupil is different in terms of knowledge, academic standards, classroom learning and academic performance. Everyone has his own in learning. Remedial instruction can help struggling learners prop up their basic skills. This extra support can help them catch up to their peers.

Remediation teachers play a crucial role during a school. While they often get the advantage of working with students one-on-one or in small groups, they need tons of labor to try to. Even though a remediation teacher’s goal is to help students get back on track and build essential skills, not all students welcome their help, making the job even more challenging.

Before a remediation teacher can effectively work with students, she must determine what the scholars need. A remediation teacher is liable for using multiple diagnostic tools to work out student needs. These tools include online and paper-based tests designed to check basic skills. The teacher also observes students as they work to spot areas of confusion. The results will help a remediation teacher to pick appropriate materials and exercises to assist students to find out.

Remedial programs are designed to shut the gap between what a student knows and what he’s expected to understand. They often target reading or math skills. In many cases, students are far away from their regular classroom and taught in another setting.
When evaluating remedial programs, be aware that not all programs are effective. Solid remedial programs:

When considering the differentiation “Teach Up,” plan first for advanced learners, then scaffold instruction to enable less advanced students to access those reach learning experiences as stated by Carol Ann Tomlinson.
