Oliver Campos
Teacher II, Mariveles National High School Camaya Campus

K to 12 curriculum offers the Technological Vocational and Livelihood or TVL track, a substantial program of the Philippines through the DepEd implementation. The said track is intended to develop twenty first century learners to a job-ready skills that lead the students to become productive in the future. Thus, one of the reason why according to an article by Flora Ian Ocampo, DepEd Region 3 is aspiring for more numbers of available assessment centers accredited by TESDA, this is due to the increasing number of enrollees of the said track.

What beneficial effects that this track can give to the students?

First, it gives vast of chances and opportunities for possible careers. This track is more of hands-on experiences and activities many learners in this program are capable of and are truly equipped with various skills needed by our localities and country.

Another rationale it is an income generating task. TESDA are giving certificates for those students who undergo competency-based assessment, the skills of the learners can be used by him/her through putting up small business of his/her own while pursuing their college life or even apply for a job right after s/he finishes his/her course. Let say, a student is under the electronics track s/he can fixed electronic devices and electric fans or even washing machine on his/her own. With such, s/he could ask for a service fee for the said broken device.

Finally, those students who wanted to continue college their experiences during the previous years in their senior high school makes them a better students for they are competent and equipped in their respective school where they are in. So, learners in
this strands have the highest priority in the industry and can be said that they found the right track.
