STAND FOR CHANGE

by:
Agnes M. Enriquez
Teacher I, Bataan School of Fisheries

There is no such easy way of winning over and reaching for success. In order for us to work our way through it, we must will ourselves to take the necessary steps and have a leap of faith no matter how slow the progress is.

In my years of teaching, I have seen students stressed over workloads and paper works. I have seen teary-eyed children complaining about mathematics and sciences. Weighing over this and that, thinking about the so and so's, I know all of it since I've been there, too. However, my dearest students we cannot take the short method. In fact, as what I have said, there are no such things. Maybe there is, but what good can we gain from it? What good do we get from chilling and complaining? None.

Since the curriculum was strict now, the students are willed to take the best out of what they have and turn themselves into the best version they can become. Like in senior high level, the junior high is also examined deeply whether they have a profound understanding of what has been taught in school. Application, examination, and practicum are everywhere - even assessments, too. Education is everybody’s endeavor and people need a high level of education to have a better life in the future. Parents are also eager to send their kids to school and hope that they succeed in life. Everyone knows that people who have higher studies are very likely to get professional work in the future. Therefore, education carries greater importance than ever in today’s society. It does not only allow people to read or write it also offers them the opportunity to have a good life, communicate better, develop new technologies and support the economy.

There are even additional subjects to which some of the students are taking. Like here in Bataan School Fisheries, wherein the students who belong to A sections take
Mandarin as one of their specialized subjects, same for those who are pursuing vocational subjects. I personally believe that these things help students in developing their full potential and confidence. There is no doubt about it. That is why I am hoping for such a change to take over because that is what we needed. Let us work our way through it, take risk and change! There is no harm in being bold. Stand up and strive for such worthy things no matter how stressing and messy they could get!
