STRUGGLES OF STUDENTS IN ONLINE LEARNING

by:
Charito M. Castañeda
Master Teacher I, Jose C. Payumo Jr. Memorial High School

The student finds that they face struggles through online learning because of the situation and circumstances that cause conflict to their studies. Online learning became more stressful for the students because they felt that it’s so hard to understand the lesson online and they having a hard time because of a lack of internet connection and they will not able to attend the online class, however, the teacher does they part to understand the students and give them a offline activity as consideration for students.

What are the common struggles that the students experience during online learning?

The students are having big trouble motivating themselves and focused in the online class- if the students couldn’t focus on their online class, it has a huge impact on their studies and to avoid this circumstance the students should prioritize themselves and do a simple thing that may help them like sleep early, waking up early, take a bath before attending an online class, have breakfast, and Lastly, they should have a couple of minutes to think about the things that make them happy.

Some of the students were lack of computer knowledge- the students face difficulties in an online class and they cannot operate the basic software literate that has a big role for their class because in order to pass the assessment it should be typewritten and the student really don’t know about it because they have no idea about the basic computer.

Online learning causes more responsibilities for the students because they need to discipline and motivate themselves to participate in online classes. The students need to know how to work and study by themselves and get used to study alone because no one
Publications can help them to study, because it’s hard to communicate personally and they need more efforts to study.
