Does the method of your teacher affects your learning? Strategies or methodologies are one of the various aspects when it comes to students learning. It makes the students to be more motivated and engaged in classroom activities. For teachers, they know what is the best for their students and as a simple student, teacher must know the needs of his/her students and also the preference when it comes to teaching, because many students are having a hard time in school so as a teacher they must know what is best.

According to Janelle Cox (2009) there are few teaching strategies that have been staple in most classroom. Depending upon your style, preference and your students which is the cooperative learning: The Jigsaw, Inquiry-Based instruction, differentiated instruction: Learning Stations, graphic organizers and utilizing technology in classroom. First is the cooperative learning: The Jigsaw from the word itself cooperative or cooperation, the teacher will let the students learn and think critically as a group and see the different point of views because research shows that students learn more effectively when working together rather than apart.

Next is the inquiry-based instruction, this strategy used to engage students to learn by asking questions, investigating, exploring, and reporting what they see. In order to be the students to success, they need to answer complex question and develop solutions for this problems.

The differentiated instructions: Learning Stations this allow students to accommodate the specific learning style. There is a theory of Gardner which is the
Multiple Intelligence which states that every person has a different mind, and therefore each person’s learn and understand information differently. Instructors can set up each station where learners will have the option to finish a similar assignment, however at the level and style that is explicitly intended for them.

Graphic organizer is a simple and effective tool because this style help the students brainstorm and organize their thoughts and ideas in a visual presentation. They help the students organize information so it is easier for them to comprehend. It can be used for any lesson, to structure writing, brainstorm, planning, problem solving or decision making like Venn diagram, Concept-Map, KWL, chart, T-Chart. Lastly is the utilizing technology in classroom, since we are in the 21st century it is very common for us to used technology but in teaching strategies technology used to the students to be more motivated and engaged longer, teachers may create web-based lesson, multi-media presentation such as animation, type of graphic, utilizing a tablet or an IPad or any form of gadgets. Any of this technology integration will have a positive impact on student learning. That is the five teaching strategies that could help on students learning.

Teachers realize that only one out of every odd instructing system that you use will be a powerful one. There will be a few hits and misses, and relying on your showing style and the manner in which your learners learn. Many teachers tend to do some strategies for students learning so it’s just a matter of how they can handle their students. As a result of good teaching strategies or methods, the students who learned will be a professional someday resulting to an impact on our country’s economic status so that the teacher must teach new strategies or methods for the students to learn new things that can apply in daily lives in order for the students to be more educated and to be a best model of youth someday.
