TEACHING MATH IN MORE FUN AND EFFECTIVE WAYS

by:
Ma. Josefina D. Navarro
Master Teacher I Gugo Elementary School Gugo, Samal, Bataan

Mathematics seems to be difficult for several learners but teaching it in the more fun ways would help them love and appreciate the subject.

Teachers show more enthusiasm in teaching. If the pupils see the great interest and initiative of the teacher in making the children learn in mathematics then they will also have the same drive and passion.

Have engaging instructional materials. The pupils love to see materials that are not only appealing but also educational. These objects help them count and analyze problems in Math actively and fruitfully.

Relate math to the practical world. The effectiveness of teaching Math may be realized if the teachers tell value and essence to the children. They would appreciate if they know its importance to the real world.

Use technology in teaching. The utilization of technology in teaching mathematics is more exciting and fun for technology is interactive and advanced and it also speeds up learning.

Integrate games in teaching the subject. It is a better practice if teachers are having games in the execution of the lessons in Math. This enables the pupils to learn and play at the same time.

Give more opportunities for interaction. The chances to participate in board works, recitations and performance tasks are indeed helpful to the pupil’s learning and enjoyment in the class.
Have collaborative learning. Mathematics teachers recognize the value of collaboration in the study of any mathematical skill or competency. Pupils love to work in groups so that they may exchange ideas together to produce better output and outcome.

Indeed, according to Paul Halmos: the only way to learn mathematics is to do mathematics. By doing the suggested ways, we do and learn mathematics.

These ideas may be useful if considered!
